

DAM SAFETY TRAINING SERIES

29th October–1st November 2019

Yangon, Myanmar

Strengthening Hazard Management and Social Awareness in Dam Safety in Myanmar

Improving awareness of disaster risk and hazards management measures and practices can contribute to the sustainability and social and environmental acceptability of new dams and their power production facilities while factoring in the implications of climate change and opportunities for implementing adaption measures.

COURSE OBJECTIVE

The course content will support efforts to strengthen the capacity of participants on aspects related to dam safety and social awareness in the context of public and private sector entities active in the development and operation of hydropower dams in Myanmar in a joint effort with development finance institutions.

International Centre for Hydropower (ICH) and IFC under the Myanmar Hydropower Developers' Association (MHDA) join efforts in a 4-day intensive training course for technical practitioners in the public and private sector in Myanmar.

The 4-day course includes extensive technical content, including sessions related to the following topics:

- Introduction to Disaster Risk Management and modern dam safety practice. Social Awareness
- Understanding climate risks and natural hazards of Myanmar and adaptive measures
- Disaster Risk Management (DRM) Approaches: preparedness, response and recovery for dam safety
- Safer Development of new dams through improved design codes and construction practice
- Cross-cutting issues in disaster risk management
- Case studies from dam incidents from around the world
- Myanmar institutional framework

Promoting Sustainable Hydropower Development

Women are encouraged to apply.
